Exp: No: 06 Building an anonymous FTP Scanner using python

Aim:

To develop a python-based anonymous FTP Scanner using the built-in ftplib module and determine whether an FTP server permits anonymous access.

Procedure:

- Install python 3.x on the windows/Linux System.
- Import the FTP and all errors classes from the python ftplib module.
- Define a function anonymous_ftp_scan() to perform the FPP scan.
- Enter the authorized FTP server address.
- Display the FTP server welcome message.
- Attempt anonymous login using the username anonymous.
- If Login is successfully, display a message including that anonymous access is permitted.
- Display the available files/directories.
- Handle Connection or login errors using exception handling.
- Close the FTP connection after completing the Scan.

Output:

Anonymous FTP Scanner

Target : 127.0.0.1

Port : 21

[1] Connecting to FTP Servers...

[+] FTP Server is reachable

[+] Server response: 220 FTP server ready

[2] Testing anonymous login.....

[+] anonymous login successful

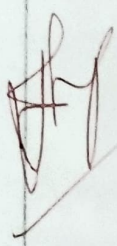

[!] The FTP server permits anonymous access

[3] Checking accessible directory

[+] Directory listing is available:

Welcome.txt

readme.txt

Result:

Thus, an anonymous FTP scanner was successfully implemented using Python's build-in ftplib module. The FTP servers anonymous access status was successfully determined.
