Experiment 3

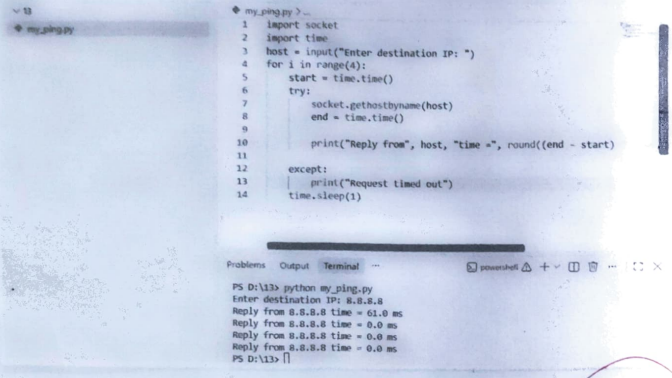

Demonstrate Network Forensics using PCAP x-Ray Tool.

Aim:

To perform network forensics by analyzing a PCAP file using the PCAP x-Ray tool to identify network protocols, suspicious activities, communication patterns, and transferred files.

Procedure:

1. Open a web browser and navigate to the PCAP x-Ray website.
2. Select a sample PCAP file from your computer.
3. Click upload and wait for the analysis to complete.
4. Observe the dashboard for total packets, protocols, and source and destination IP addresses.
5. Analyze the protocol distribution, such as TCP, UDP, HTTP, HTTPS, DNS and ICMP.
6. Generate and save the analysis report if the option is available.

Result

Thus, network forencies was performed successfully using the PCAP X-Ray tool, and network protocols communication patterns, transferred files and suspicious activities were analyzed.
