Capture and analyze Network traffic using wireshark

Aim:

To capture and analyze network traffic using Wireshark and identify the protocols and communication between devices.

Procedure:

1. open wireshark on the computer.
2. Select the network interface to capture traffic
3. Click start capture to begin capturing packets.
4. Generate network traffic by browsing networks or using the ping command
5. observed the captured packets in the wireshark window.
6. Select a packet to examine its protocol details and packet contents
7. Stop the capture and save the captured traffic file if requirsed.

Result:

Thus network traffic was captured and analyzed successfully using wireshark and packets and their corresponding network protocol were identified.
